

PLACE VALUE COVER UP

SKILL-

Begin understanding place value. For instance, the number 15 is one ten and 5 ones.

Think of numbers in multiple ways.

PREP-

Print the cover up record sheet.

If possible, print the cover up cards on a different colored paper. Cut apart the cards to separate the pieces and spread them out on your table.

PLAY-

Have your child pick one of the boxes on his record sheet and solve the mystery number. For instance, if the box says "2 + 4" the answer is 6.

Then ask him to find the number 6 card and lay it in the matching spot on his record sheet.

Play continues until all of the boxes have been covered.
